DIRECTIONS FOR USE

1. The correctly sized impression tray is filled with product and inserted into the mouth. Maintain the tray in place with minimal pressure until the material has set. After the material has set, remove and rinse the impression with cold running water.
2. If possible, pour the model immediately; if not, keep the impression in a moist cloth until poured.
4. The best results are obtained when using water and powder at 21ºC.
5. When not in use, keep the container sealed and store in a cool dry place.

Mix Ratio:

Always keep the proportions of the mixing ratio to: -
- One measure of powder (8g) to a half-measure of water (20.5ml).
- To measure the powder, fill the supplied measure and level it, without compressing, using a clean spatula.
- Mix the powder and water for a maximum of 30 seconds for Plastalgin and 45 seconds for Plastalgin Ortho.
